

**The Kohs & Company** edition of the New York Central J3a o'scale 'Hudson' is intended to be the ultimate example of the modeling art. Accurate in every detail and incorporating features never offered before in this scale, we hope to exceed your expectations with our offering.

We will produce 100 units of this edition and they will be evenly split between the two basic versions of the locomotive; the Scullin disc version and the Boxpok version as illustrated here in. Included in the 100 units is a further special offering in the form of 'builder's photo' versions of each type, there will be ten (10) each of road numbers 5405 and 5437. The 'builder's photo' versions will be unique in paint and trim; the gloss of the paint will be approximately 60% and trimmed in white on the tire faces, running board edges and on the lower edge of the cab, while the hand-rails will be black (see photos). The balance of the edition (service versions) will be painted in a matte-black finish without the white accent trim and will have stainless steel hand rails.

When you make your selection of version, please be certain to select appropriate road numbers for the version. We ask that you indicate your first three (3) choices for road numbers and we will do our best to honor your selection in order of preference. Upon receipt of your completed registration form along with your deposit, we will issue a confirmation letter and certificate indicating which road number you have been assigned. It is very important that your initial registration is completed accurately, as this will be the basis for honoring the limited lifetime warranty for your model.
