Union Pacific 'type' (4-12-2)

Coming in 2003, the fabulous Union Pacific 'type' 4-12-2, the largest rigid frame locomotive ever built. This prototype, with its long frame and exposed suspension detail, is the perfect showcase for our modeling technology. As with all of our models, we will incorporate equalized and sprung suspension with actual fabricated leaf springs. We will offer three versions; UP-4 pre-war with 'old' style graphics, UP-4 pre-war with 'new' style graphics both with 18-C tenders and the UP-3/4 as modified post-war version in late service with 18-C tender. This project will again be a collaborative effort with our builder, Sun Jin Models Company in Korea and Dalle Electronics, Incorporated. The most immediate source of information on this project is our web site, but we will be doing postal mail updates as well.
